EJECT SCP Spill Case Number 82-11-24-03N

SDMS Document

67617

On November 24, 1982 at 1530 hours the writer was dispatched to a reported spill at SCP in Carlstadt. Tank # T 118 was reported to be leaking by John Strong BAPC in Newark. The writer arrived at 1600 hours and examined T 118. It has a thick residue on the ground but was not observed to be leaking. The valve on Tank 109 was observed to be dripping. The writer took photographs of the site, radioed the office to relay this information and then was told to secure from the site.

I secured the site at 1630. This is a hazardous waste case and the information will be transferred to them.
